### For Using Data

#### Principal Investigator

Data Management Office

#### Use Constraints

See [Terms and Conditions](#) about constrain of use.

#### Data Citation

See [Terms and Conditions](#) about data citation.

### Period (UTC)

2006-12-11 22:01 – 2006-12-12 09:58

2006-11-28 23:02 – 2006-12-10 10:58

### Instrument

Instrument:

Three component magnetometer

### Overview

The data provided is for corrected three component geomagnetic field anomalies. Three-axes flux-gate sensors with ring-cored coils were fixed on the roof of the bridge.

They measure the following items :

h-component : along track line component, positive for the bow direction pitch.

s-component : across track line component, positive for the starboard side roll.

v-component : vertical component, positive for the downward direction.

The effect of ship motion was eliminated by roll and pitch data which was provided by a tilt sensor. The apparent magnetic influence can be detected through a "Figure of 8 turn"(a pair of clockwise and anti-clockwise turns) on each cruise. If no Figure of 8 turn on the cruise was completed, the latest Figure of 8 turn from the previous cruise was applied (see section 4.). As a quality control, data of low reliability was removed (see section 5. for quality control criteria).

Synthetic geomagnetic field values were calculated from IGRF models.

### Measurement System

#### (1) Magnetometer

Manufacturer : Tierra Technica Ltd.

Type : SFG1214

Measurement range :  $\pm 100,000$  nT

Accuracy : less than 100 nT

Resolution : 1 nT

Location : Dry Laboratory

#### (2) Magnetic Sensor

Manufacturer : Tierra Technica Ltd.

Form : flux-gate sensors with ring-cored coils

Location : Foremast

#### (3) Attitude sensor and Gyro compass

Manufacturer : IXBLUE

Type : PHINS

Accuracy(Roll, Pitch) : 0.01 degree

Accuracy(Gyro) : 0.01 degree \*Secant(Lat.)

Location : In the doppler radar dome

### Duration of the Figure of 8 turn

In MR06-05\_leg2 cruise

Date (UTC)

2006/12/07 12:15:00 - 2006/12/07 12:35:00

### Data processing

The following corrections and calculations were performed.

(1) Ship magnetization correction  
 $Hob = ARPYF + Hp \text{ ---(i)}$   
Hob: Observed magnetic field vector (Ship coordinates)  
A: Effect of induced magnetization of the ship  
R: Matrix of rotation due to the roll  
P: Matrix of rotation due to the pitch  
Y: Matrix of rotation due to the heading  
F: Geomagnetic field vector  
Hp: Ship's permanent magnetic moment

Following the equation(i), we calculate the geomagnetic field F.  
 $RPYF = BHob + Hbp \text{ ---(ii)}$   
B: coefficient of Figure of 8 turn  
Hbp: Permanent magnetic field vector of the ship

Reference: Isezaki,N., A new shipboard three-component magnetometer , GEOPHYSICS. VOL.51,NO10(1986);P1992-1998

(2) International Geomagnetic Reference Field (IGRF)  
Synthetic geomagnetic field values are calculated from IGRF 12th Generation models by using navigation data ; latitude, longitude and date.  
Reference: IAGA Division V-MOD Geomagnetic Field Modeling[<http://www.ngdc.noaa.gov/IAGA/vmod/igrf.html>]

(3) Calculation of the geomagnetic field anomaly  
 $An = F - Figrf$   
An: Geomagnetic field anomaly vector  
F: Geomagnetic field vector  
Figrf: Synthetic geomagnetic field vector from IGRF

(4) Quality control of data  
Following criteria were used for removal of data of low reliability:

- Time error (inversion of time, continuation of same timestamps)
- Summation of the difference of heading by one second exceeding 20 degree per 5 minutes
- Ground speed of the ship below 3knot or exceeding 20knot
- X, Y, or Z component of geomagnetic field anomaly exceeding  $\pm 4000nT$

(5) Filtering of the geomagnetic field anomaly  
Due to the residual undulation of the ship, a 120 second length Gaussian filter was applied for each component of the geomagnetic field anomaly data.

(6) Output of the data  
Time (UTC)  
Latitude (degree)  
Longitude (degree)  
X: Northward (positive on the north) component of geomagnetic field anomaly (nT)  
Y: Eastward (positive on the east) component of geomagnetic field anomaly (nT)  
Z: Vertical (positive for downward) component of geomagnetic field anomaly (nT)  
T: Absolute value of geomagnetic field anomaly (nT)

#### Coefficient of the Figure of 8 turn and Permanent magnetic field vector of the ship

This coefficient was calculated from the above-mentioned Figure of 8 turn

|    |         |        |         |      |            |
|----|---------|--------|---------|------|------------|
|    | 0.9921  | 0.0343 | 0.0161  |      | 2340.9023  |
| B= | -0.0363 | 1.0598 | -0.0056 | Hbp= | 712.2365   |
|    | 0.0358  | 0.0043 | 0.8460  |      | -1024.7490 |

#### Note

- (1) File naming rule: Cruise\_ID\_corr.stcm
- (2) Sampling rate: 10 seconds
- (3) Geodetic system: WGS84
- (4) If you would like the raw data set, please contact us from "Contact Us" above.
