Summary

The KR01-10 cruise was conducted as a part of the following researches:

- (1) Frontier research on earth evolution,
- (2) Ocean floor dynamics research,

which are being carried out by Japan Marine Science and Technology Center (JAMSTEC).

Main objective of the cruise is to make geophysical and geological observations of subduction zone at the southernmost Japan trench region and the northernmost Izu-Ogasawara Trench region, in support of revealing the mechanism of subduction zone earthquakes.

During the cruise we used the R/V "KAIREI" of JAMSTEC to conduct a multichannel reflection seismic (MCS) survey off Boso from 3 July to 17 July, 2001.

We acquired total 1027 km of MCS data on 5 lines by a 156-channel digital streamer cable. Eight 1500 cubic inch air-guns were used as the seismic energy source. The study area and survey lines are shown in Figure 1. An onboard-processing result of the line BS103 was shown in Figure 2.

Finally, thanks are due to Captain Ukekura, Seismic Party Chief Katayama, scientific support staffs and the crew of the R/V KAIREI for their support on board.

1. Survey outline

1.1 Survey area

The survey area of KR01-10 cruise is located east off the Chiba and Ibaragi prefectures, as shown in Figure 1. During the survey, the following five survey lines were planned and observed.

<u>Line Name</u>	<u>Direction</u>	<u>Length planned</u>	<u>Length observed</u>
BS101	NW-SE	180 km	188.3 km
BS102	NW-SE	184 km	146.8 km
BS102_2	NW-SE		74.7 km
PS102	NW-SE		121.5 km
BS103	NW-SE	166 km	155.4 km
BS201	NE-SW	140 km	144.4 km
PS201	NE-SW		51.8 km
BS202	NE-SW	140 km	144.6 km
Total Line Length		950 km	1027.5 km

BS***: Standard observation line

PS***: PS converted wave line

1.2 Time schedule

The R/V KAIREI has left the JAMSTEC Natsushima port on 3 July 2001, and has come back to the Uruga port on 17 July 2001 in this cruise.

During the cruise, we conducted some examinations of our MCS data acquisition system such as a data telemetry testing of the lead-in-cable and streamer-cable.

A detailed time schedule is shown in Table 1.

1.3 Weather and sea status

Weather in the area was almost fine excluding two days when more than 15 m wind blew.

1.4 Participants

Participants on KR01-10 cruise are as follows:

1) Researchers

Tetsuro TSURU, IFREE/JAMSTEC (**Chief scientist**)

Seiichi MIURA, IFREE/JAMSTEC

2) Scientific support staffs who operate the MCS data acquisition and processing system

3) Crews who operate the vessel

All of the participants are listed in Table 2.

2. Observation system

The observation systems for the MCS survey are as follows:

Streamer cable: Syntron 24-bit digital streamer

Air gun: Bolt par airgun Model 1500

Recording system: Syntron SYNTRAK 960

Navigation system: Concept SPECTRA

Processing software: JGI iXL

Detailed information of the above systems are shown in the Attachment 1.

Furthermore, we used the following systems for observing geoscience data.

Shipboard three component magnetometer: Tierra Technica, SFG-11214

Proton precession magnet meter: Kawasaki Geological Engineering Co., LTD,
PRT10 magnetometer

Gravity meter: BODENSEEWERK, KSS31 marine gravity meter

Multi-narrow beam : SeaBeem Instruments, SEA BEAM 2112

3. Survey specifications

The specifications of MCS reflection data acquisition are shown in Table 3.

4. MCS onboard-processing result

We have carried out onboard processing of MCS data by the iXL software. Figure 2 shows a CDP stacked section of the line BS103. From this figure, we can recognize continuous reflections coming from the base of sedimentary layer and the plate boundary.

等走時ノイズ（同位相ノイズ）について

2001年7月

1. 発生源

白のフェザリング付きのリードインケーブルが発生源。

なお、両端のコネクターを開けて導通テスト等を行ったが、当方では、不良箇所を特定できない。メーカーに修理に出す必要あり。

2. 現象

1999年 等走時ノイズは見当たらなかった。

2000年4月青森沖にて、等走時ノイズが発生。観測を継続。

2000年6月北海道南東沖にて、発生源がリードインであることを確認。

この時は、海側のコネクター部を水面から浮かせれば、ノイズが発生しなかったため、この方法で暫定的に観測を継続。

その後、予備のリードインを取り寄せ、交換。

白のフェザリング付きリードインをメーカーに修理に出す。

2001年5月東海沖にて、一部の測線（TK-3）で時折発生（*1）。観測を継続。

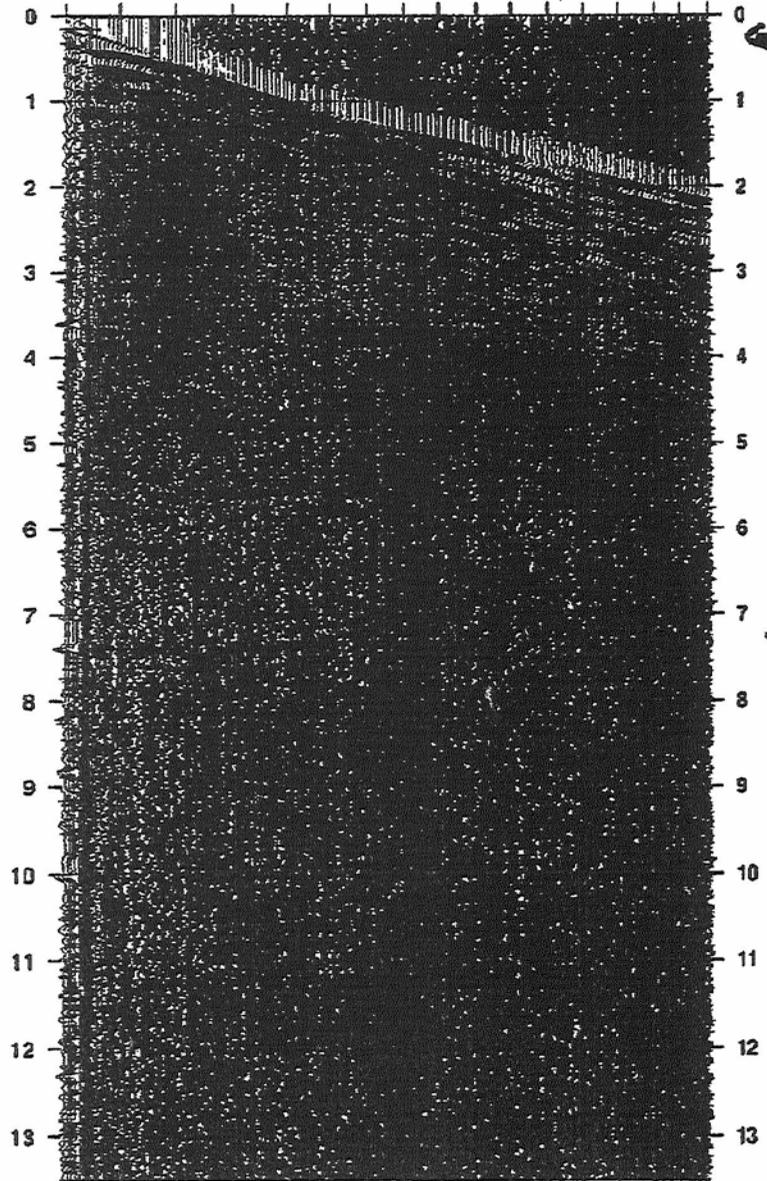

2001年7月房総沖にて、ノイズが大きくなり（*2）、至急予備のリードインを取り寄せ、交換。

P S 変換波受信実験

1. 通常の MCS 探査時と比べて以下の3点について変更をお願いします。

1-1. 左右アンビリカルケーブル巻き出し長の変更 (別図参照)

右舷側：船尾からターミネーションハウジングまで 54m (-42m)

左舷側：船尾からターミネーションハウジングまで 102m (+16m)

(左右どちらでも構いません)

1-2. ストリーマーケーブル長の変更

ケーブル長延長のためアクティブセクション4本(300m)追加

リードインケーブルの巻き出し (100m?)

+90m

1-3. エアガン発震時の変更

エアガンはトーイングフレームの2基を1組と考える。

船側のエアガン1組から後ろへ1組ずつ発震時を遅らせる (beam delay)。

Beam delay の値は本実験直前の beam delay test によって決定する。

Beam delay test は 0,2,4,6,8,10,12 msec の各値に対し、それぞれ10ショット

ずつデータ収録を行い、その結果をみて本実験の値を決定する。

Water delay はかけない。

尚、本実験の値を検討する間、各 beam delay に対し50ショットずつデータを収録する。

2. 実施測線は BS201 測線

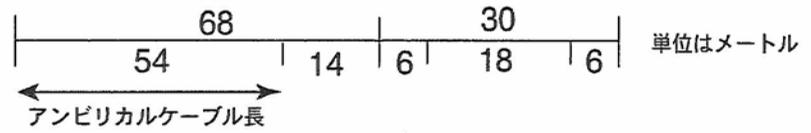

水深の浅い部分(測線北部分)でのデータ取得が望ましいので、通常 MCS 探査後、余裕をもって北にぬけてください。

本実験は BS201 測線の北端から BS102 測線との交点まで。

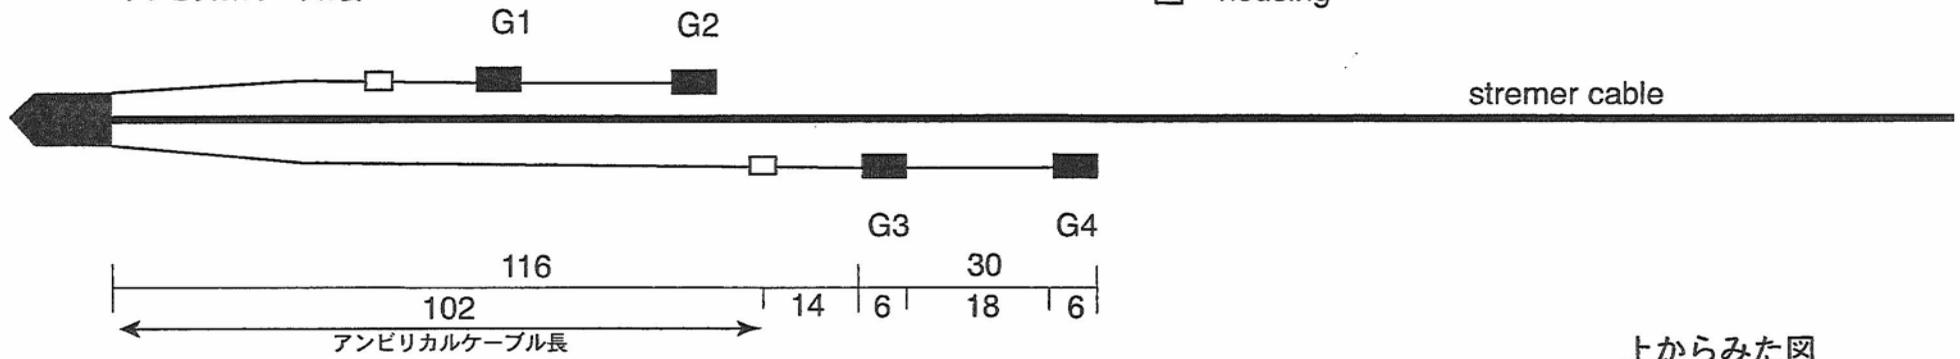

その後 BS102 測線の東部分に移動。

以上、よろしくお願いいたします。

MCS in Boso Offshore

Attachment 5

Shot Time Recording

1999年のエアガン増強に伴い、他機関から Shot Time に関する情報が欲しいとの依頼があった。このような依頼に対し、これまでは、海底地震計調査時に使用する True Time system の出力ファイルを渡すことで対応してきた。

本来は、MCS 測位システム (SPECTRA) による出力ファイル UKOOA を渡せば良いはずであるが、従来 MCS では Shot Time の正確な絶対値は必要がないため、その最小桁が秒の単位である。一方、先方のニーズはミリ秒の単位である。

本年度バージョンアップされた SPECTRA では、下記のオプションを使用すれば、小数点以下 8 桁秒までの Shot Time を記録できるようになった。

設定するオプション：

User defined observation パラメータの中の、

Chennel name を Time Break

Interface name を GN-V-TRIGGERS

とする。

出力された UKOOA-P2 ファイルの中から、以下の情報を取り出す：

水深 --- T14101 の行の 7-12 コラム

SP 番号 --- E1000 の行の 24-31 コラム

日付 --- E1000 の行の 50-57 コラム

Shot Time (整数部分) --- E1000 の行の 59-64 コラム

Shot Time (小数点および小数部分) --- T7010 の行の 31-39 コラム

緯度経度 --- E1210010013 の行の 14-36 コラム

なお、詳細は別紙参照。
