

YOKOSUKA YK00-06 Leg1 Total Magnetic Intensity (TMI)

Last Modified: 2019-06-26

[ReadMe](#) [Observation Data](#) [Data Format](#)

Cruise ID: [YK00-06 Leg1](#)

Total Magnetic Intensity (TMI): Processed (DMO)-Corrected

Data Policy: [JAMSTEC](#)

Observation Items: Total magnetic field intensity

Science Keywords:

OCEANS > MARINE GEOPHYSICS > MARINE
MAGNETICS
SOLID EARTH > GEOMAGNETISM

For Using Data

Principal Investigator

Data Management Office

Use Constraints

See [Terms and Conditions](#) about constrain of use.

Data Citation

See [Terms and Conditions](#) about data citation.

Period (UTC)

2000-07-11 09:18 – 2000-07-17 05:42

Instrument

Instrument:

Proton magnetometer (- YK06-14

Leg2)

Overview

The proton precession magnetometer measures the total magnetic field intensity as the frequency of electric current which is generated by the proton precession. In order to avoid the ship's magnetization, the instrument is towed by the vessel about 200 - 300m. As a quality control, data of low reliability was removed (see section 5. for quality control criteria). Synthetic geomagnetic field values were calculated from IGRF models.

Measurement System

Manufacturer : Kawasaki Geological Engineering Co. Ltd.

Type : PROTO10

Measurement range : 30,000 - 65,000 nT

Resolution : 0.01 nT

Accuracy : 0.1 nT

Location : No.1 Study Room

Data processing

The following corrections and calculations were performed.

(1) International Geomagnetic Reference Field (IGRF)

Synthetic geomagnetic field values are calculated from IGRF 11th generation models by using navigation data ; latitude, longitude and date.

Reference:JAGA Division V-MOD Geomagnetic Field Modeling(<http://www.ngdc.noaa.gov/JAGA/vmod/igrf.html>)

(2) Calculation of the geomagnetic field anomaly

$A_n = F - F_{igrf}$

A_n : Total geomagnetic field intensity anomaly

F : Observed total geomagnetic field intensity

F_{igrf} : Synthetic total geomagnetic field intensity from IGRF

(3) Output of the data

Time (UTC)

Latitude (degree)

Longitude (degree)

Observed total magnetic field intensity (nT)

Total geomagnetic field intensity anomaly (nT)

Quality control of data

Following criteria were used for removal of data of low reliability:

- Time error (inversion of time, continuation of same timestamps)
- Ground speed of the ship below 1knot or exceeding 20knot
- Total geomagnetic field intensity anomaly exceeding ± 4000 nT
- Spatial gradient of the total geomagnetic field intensity anomaly exceeding ± 300 nT/km

Note

- (1) File naming rule: Cruise ID_corr.tmag
- (2) Sampling rate: 20 seconds(It depends on geomagnetic field intensity and inclination)
- (3) Geodetic system: WGS84
- (4) If you would like the raw data set, please contact us from "Contact Us" above.
