Instrument

Instrument:

Ceiliometer

Overview

Ceiliometer is the system that measures cloud base height by laser pulse emitted vertically.

Up to three levels of cloud base can be detected by measuring the change of strength of backscatter signal.

And the cloud base height is calculated from the elapsed time from laser pulse emission to backscatter detection.

In case the cloud base is obscured, it measures the vertical visibility.

System

Manufacturer: Vaisala Inc.
Type: CL51
Serial number: L1220347
Measurement range: up to 15000m (Backscatter measurement)
up to 13000m (Cloud detection)
Resolution: 10m
Sampling rate: 06-120 seconds available (36sec as default)
Accuracy: +/- 5m (Distance measurement accuracy to fixed object)
Location: Compass (17 meters high from sea surface)
Recording software: CL-VIEW Ver2.00

Note

(1) File naming rule for AYMDDHH.DAT(CL-VIEW Ver2.00).

A : Fixed as 'A'
Y : Year in 1 digit
MM : Recording start month (UTC)
DD : Recording start day (UTC)
HH : Recording start time (UTC)

(2) Adjustment for the height : No sea surface level adjustment is applied to the raw data.
