## Overview

The data provided here is format-converted marine meteorological data observed by R/V SHINSEI MARU. It consists of Atmospheric Pressure, Air Temperature, Relative Humidity, Wind Direction and Speed, Rainfall, Radiation, Sea Surface Temperature, and the ship position data is added. Quality control such as averaging is not performed.

## Measurement System

Sensors	Manufacturer	Type	Location (from sea surface)
Anemometer	ANEOS, Japan	N-363D	Foremast (15m) Mainmast (24m)
Tair	ANEOS, Japan	TS-301C	Foremast (15m)
RH	Vaisala, Finland	HMT333	Foremast (15m)
Thermometer (SST)	ANEOS, Japan	Pt100 N66M	Ship bottom (-4.5m)
Barometer	Vaisala, Finland	PTB330	No.1 Laboratory (9.5m)
Rain gauge	R.M. Young, USA	50202	Compass deck (14m)
Radiometer (shortwave)	Hukseflux, The Netherlands	CHF-LP02	Compass deck (14m)
Radiometer (long-wave)	Hukseflux, The Netherlands	CHF-IR02	Compass deck (14m)
Surface photosynthetically available radiometer (PAR)	Delta OHM, Italy	LP PAR01	Compass deck (19 m)

## Calibration Information

Tair/RH sensor calibration date 2023/1/23

## Note

- 1) About the shortwave radiation, please use both sensor data No.1 and No.2, because shortwave radiometer may be shaded by the hull structure.
- 2) About the atmospheric pressure, the barometer is measured in No.1 laboratory, a pressure difference with the ship outside atmosphere might occur in some situation.
- 3) Surface photosynthetically available radiation (PAR) is invalid due to output questionable values throughout this cruise.
- 4) If you would like the raw data set, please contact DMO at "dmo@jamstec.go.jp".

\* A ship's position data is not included in the raw data of R/V SHINSEI MARU meteorological observation system, the latitude and longitude are added from the "navigation" data.

If there is no "navigation" data for that time stamp, the latitude and longitude of 5 seconds after is used.
